

DIO32276

DPDT (0.8 Ω) HiFi Audio Switch with Negative Swing

Features

- Power supply voltage range: 1.65 to 5.5 V
- $R_{ON} = 0.8 \Omega$ (Typ.) at 3.3 V
- THD+N = -110 dB; 2 V_{RMS}, 600 Ω load; f = 1 kHz
- X_{TALK} = -110 dB at 1 V_{RMS}, 50 Ω load; f = 1 kHz
- Off isolation = -110 dB at 1 V_{RMS}, 50 Ω load; f = 1 kHz
- External capacitor connection for pop and click noise suppression
- Power-off protection on common ports
- DQFN 1.8*1.8-12 package
- V_{CC} = 0 V/float, all switch-I/O Hi-Z

Descriptions

The DIO32276 is a high-performance, double-pole double-throw (DPDT) analog switch with negative V_{CC} swing audio capability. The DIO32276 is featured in ultra-low audio R_{ON} of 0.8 Ω (typical) at 3.3 V. The DIO32276 operates over a V_{CC} range of 1.65 to 5.5 V, and it is made of sub-micron CMOS technology to achieve fast switching speeds, aiming at break-before-make operation. When it is operating, the turn-on ramp time is selectable by using an external capacitor (C_{EXT}) to minimize pop and click during operation.

The DIO32276 is advantaged in THD+N specifications which target a Hi-Fidelity audio quality into both 32 Ω headphones and line out type loads (> 600 Ω).

Applications

- Mobile phones
- Tablets
- Notebook PCs
- Media players
- Docking stations
- TVs
- Set-top boxes
- LCD monitors

Absolute Maximum Ratings

Stresses beyond those listed under the Absolute Maximum Rating table may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other condition beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. DIOO does not recommend exceeding them or designing to absolute maximum ratings.
