Descriptions

The DIO6002 is high-efficiency, high frequency synchronous step-down DC-DC regulator ICs capable of delivering up to 1.5A peak load current within 2.5V-5.5V input voltage.

The DIO6002 family integrate main switch and synchronous switch with very low $R_{DS(ON)}$ to minimize the conduction loss. Low output voltage ripple and small external inductor and capacitor sizes are achieved with greater than 1.5MHz switching frequency.

The DIO6002 is available in SOT23-5 package, requires only a minimal number of external components.

Pin Definitions

Pin Name	Description
EN	Enable control. Pull high to turn on. Do not float.
GND	Ground
LX	Inductor pin. Connect this pin to the switching node of inductor.
IN	Power Input
FB	Output Feedback Pin. Connect this pin to the center point of the output resistor divider (as shown in Figure 1) to program the output voltage: $V_{OUT} = 0.6 * (1 + R1/R2)$. Add optional C1 (10pF~47pF) to speed up the transient response.
